

Seamlessly comply with:

- Hours-of-Service regulations
- International Fuel Tax Agreement

Automated regulatory compliance

As the logistics managers struggle with existing issues and face new challenges and governmental regulations, their goals stay the same - to efficiently comply with governmental regulations, while managing a complex mix of vehicles, mobile employees and customers' demands, meeting safety and environmental standards and keeping an eye on operational costs.

Telargo assists logistics managers meet their objectives by enabling them to easily operate inside regulatory constraints, enhance service levels, maximize fleet utilization and minimize operational costs. As integral parts of Telargo Service, IFTA and Hours-of-Service automated reporting features present yet another opportunity to reduce unnecessary costs and risks, simplify and automate the compliance procedures and streamline the reporting process.

Key Benefits

- *Comply with FMCSA Hours-of-Service regulations*
- *Comply with state and federal fuel tax regulations*
- *Reduce the risk of regulation violations and the cost of related fines*
- *Improve drivers HOS data visibility and availability*
- *Streamline reporting process*
- *Increase operational efficiency*
- *Reduce administrative costs and errors*
- *Improve drivers satisfaction and efficiency*

HoS Compliance Monitoring & Reporting

Federal Motor Carrier Safety Administration (FMCSA) rules and regulations especially regulation 395.15, otherwise known as Hours of Service regulations exist to protect specific drivers from abusive and unsafe working conditions. Telargo understands the associated logistics managers' issues, so we have made it easy to seamlessly comply with the HoS rules specifying Electronic On-board Recording (EOBR) devices used to record drivers' hours of service instead of filing traditional paper logs.

Telargo Service offers customized driver statuses translated to HOS related statuses (ON, D, OFF, SB), automated upgrade for new regulations and rulings and supports individual and multiple driver operation with the capability of separately recording individual driver's duty status, all in order to avoid costs caused by manual log systems, operational inefficiency and reduced productivity.

Automated near real-time updates about duty status, driving time, and remaining hours of service, automatic near real-time alerts of impending or actual violations to both drivers and dispatch and web-based access to information about driver status and availability reduce unnecessary costs, risks and decrease the possibility of regulations compliance breaches.

Complete driver-management and safety audit reports based on captured and displayed driver data are available through web browser on Telargo Control Center while the drivers are prepared for roadside inspections with the ability to access the HOS related data on their in-vehicle driver interface. Telargo Solution allows automated regulatory compliance, while reducing costs and keeping shipments moving. It results in saved time and money by eliminating unnecessary paperwork and administrative costs.

IFTA Compliance Reporting

The International Fuel Tax Agreement (IFTA) is an agreement among 48 States of the US and 10 Canadian provinces to simplify reporting of fuel use taxes used by interstate/interjurisdictional commercial motor carriers. Telargo understands that the complexity of calculating, recording and reporting based on manual logs can result in countless man hours and unnecessary costs.

Telargo has integrated Federal approved and State/DOT compliant ProMiles® Fuel Tax Software in Telargo's mobile asset management solution for the trucking and logistics industry. It is tightly integrated with routing and automation and enables you to create actual state reporting forms which simplifies IFTA compliance and streamlines the reporting process.

Visually displayed routing information and numerous consistency checks with virtually all new regulations and rulings updates eliminate transposition errors and increase reporting accuracy.

Automated real-time odometer readings capture from Telargo Mobile Unit and web-based access to real-time data for each truck, group of trucks or for entire fleet, empowers logistics managers with access to automated generation of on screen, printed or downloadable (Microsoft Excel, formatted PDF or HTML files) reports and enable them to meet these regulations with just a few mouse clicks.
