Enterprise fleets

Standardize, automate and simplify

Fleet administrators managing either corporate or governmental fleets are responsible for mixed pools of vehicles driven by employees with various driving styles used for different purposes.

They strive to automate and standardize fleet related administration, maximize overall fleet utilization, reduce the total costs of vehicle ownership as well as extend the vehicle lifetime. To decrease maintenance costs, easily manage all operational expenses and reduce insurance rates while increasing service transparency is not an easy task.

Additionally, the lack of accurate statistical data prevents them to further increase the cost-efficiency of their vehicle pools by performing optimization of vehicle pool size & mix.

Telargo Service offers comprehensive integrated solutions that help fleet managers in charge of enterprise fleets achieve these goals and improve driver behavior, enhance analysis capabilities, stop the unauthorized use of vehicles and expedite stolen vehicle recovery at the same time. Its features and the possibility of system integration with existing vehicle pool management software provides enterprise fleet administrators with tools and solutions that standardize, automate and simplify day to day operations, from vehicle pool and maintenance management to time accounting and reporting.

TELARGO SERVICE FOR UTILITY COMPANIES

FEATURES & CAPABILITIES

AUTOMATE VEHICLE POOL ADMINISTRATION. Requesting a vehicle, allocating the needed or requested vehicle type, automated pool vehicle reservations for business or private use and various activity reports upon returning the vehicle are just some of the features enabled by Telargo Service that turn vehicle pool/fleet related administration into automated and standardized process. It also provides automated allocation of requests with the most appropriate and cost effective vehicle.

MONITOR VEHICLES IN USE. Real-time vehicle positioning and monitoring, driver visibility, alerts and exceptions notifications as well as reliable voice and messaging communication through Telargo Handset or Telargo Mobile Data Terminal with navigation possibility and driving style monitoring turn the enterprise vehicle usage into controlled activity.

OPTIMIZE VEHICLE POOL SIZE & MIX. Telargo Service can be easily integrated with existing vehicle-pool management software enabling detection of vehicles that are not used enough or that are not appropriate for their normal use. Statistical data derived from long-term utilization monitoring is the proper tool for successful vehicle pool optimization. This information presents a solid base for fleet size & mix management resulting in substantial savings as well as ensuring better vehicle residual values.

MAINTAIN FLEET RELIABILITY. Fleet maintenance teams should stay on track with important vehicle maintenance events in real-time as well as schedule routine maintenance checks and be notified of them in time to en-

sure effective preventive maintenance. Remote diagnostics solution utilizes Diagnostic Trouble Codes (DTC) for predictive maintenance and taking action before the possible future vehicle malfunctions occur. Telargo Service offers complete support and analyses tools for asset lifecycle management. The road towards decreased maintenance costs, improved reliability and increased safety is shortened and simplified.

SIMPLIFY & AUTOMATE COMPLIANCE. DOT Hours of Service, IFTA Fuel tax and EU Tax reporting standards are government regulations that have a great impact on managing a fleet either governmental or corporate. A broad scope of Telargo solutions and their features ensure compliance with these regulations in cost efficient, automated and exact manner. Compliance with these rules and regulations leads to decreased costs and liability risk.

MANAGE EXPENSES. Telargo's Business Intelligence features extensive reporting and analysis, real-time interactive KPI dashboards and enhanced data mining possibilities. Advanced customization, scheduling and electronic delivery of reports enables production of timely, easy-to-understand intelligence resulting in reduced administrative costs and most importantly improved decision-making capabilities.

AUTOMATE AND COLLABORATE. Integration of Telargo Service with the company's ERP extends time accounting features and is an advantage in achieving enhanced workflow automation resulting in saved time and money as well as reduced paperwork.
